Customized splash
protection for ears

www.dreve.com

FOR KIDS AND ADULTS

While bathing, showering or swimming, water could easily get into the ear canal. Depending on the water's quality, this can unfortunately result in infections and earaches.

In particular children's ears might be affected by entering germs and bacteria due to the special anatomy of their ears. With the help of OtoSwim® water cannot get in. Especially after a tympanostomy tube surgery, the earmolds are highly recommended to protect your ears or those of your kids!

SPLASHY ADVANTAGES

- 3D printed earmold with 100 % customized geometry
- High wearing comfort and ideal sealing
- Easy to insert and to remove due to convenient handle
- Earmolds float and stay on the water surface
- Great color styles
- Easy to clean (e. g. with OtoVita®)
