

# Dreve Otoplastik GmbH

## [Company Portrait]

The Dreve Otoplastik GmbH in Unna is a family-run, medium-sized company which has developed to one of the leading international earmold manufacturers. Our company was founded in 1949 by Wolfgang and Inge Dreve. They belong to the inventors of the custom-made earmold and established the first earmold laboratory in Germany. The creation of one of the first individual earmolds for more than 70 years ago, was a breakthrough compared to standard fitting. Since then, we have been an innovation driver in the industry and are constantly setting new standards.

We combine many years of practical experience with the latest scientific research and technical know-how. The result: more than 80 patents and trade relations in over 100 countries.

From the production of the first 3D printed earmold to the complete digitalization of the earmold production process, we remain true to our company motto "Innovation aus Tradition": curiosity and innovativeness, combined with the passion for our products and closeness to the industry, to our customers and our employees.

Dreve is operating worldwide and employs more than 400 people. We are continuously working on the advancement and improvement of the earmold production processes and and the best possible fitting.
